

Team Waterfall Method

Ryan Niday, Adam Van Hal, Stuart Wreath

Platform

Officially supported by any HTML5 enabled web browser

Work Assignments

Event time frame for single day events - Adam

Recurring events - Stuart

Multiday Events/UML - Ryan

Challenges

Surprises in implementations of HTML5 in different browsers

- Example: Date fields and Time fields

Issues with github not reflecting new changes as soon as expected

PHP errors are often invisible crashes

Not Included Features

Non-timed events

Multiuser support

Removing events from the day view ui

Removing events by specifying a date/time

Hindsight

Better use of helper libraries to support browser differences could have happened

More coordination to see if more code reuse is possible
